

RAIN JACKET CIVIL DEFENCE

TECHNICAL DATASHEET

The rain jacket was designed as a garment that can be worn in case of heavy rain or wind, because it is made from top waterproof/windresistant/breathable material. Due to its light weight, it's perfect for layering, as it is suitable for warmer weather (with light clothing under the jacket - such as a polo or t-shirt), and also colder months (if the user wears a compatible thermal jacket beneath). Its versatility and big attention to detail makes it a perfect all-around choice for professional and casual wear.

PRODUCT CODE

- **Men's:** VE023519
- **Women's:** VE023520

MATERIAL

- 100% polyester top layer.
- ePTFE membrane middle layer.
- 100% polyester bottom layer
