

TACTICAL CARRIER VEST BR152

TECHNICAL DATASHEET

The vest BR152 is a tactical carrier vest, which was designed for external wear. It has the option to contain soft, supplemental hard, or both types of ballistics protection plates. It is made with the MOLLE webbing, which enables the user to add additional gear and cargo bags. It has options of adjustments with velcro, for comfortable wear on the shoulders and on the sides, and extra adjustment is possible with the elastic band with velcro, on the inner side. The carrier has the options for insignia on the front left and right side, and on the back. The back side has plenty of empty surface, so it is possible to include reflective print, and if there is the need to conceal that, there is the possibility to do that as well, with the pull-out fabric. The inner side is lined with foam, which contain air channels, that offer extra cooling to the user.

PRODUCT CODE

- Unisex: B464S13
